The Contract Review Crisis

Why enterprise legal teams are overwhelmed

Days to Weeks

A single enterprise contract review can take 3–5 business days involving multiple legal specialists, back-and-forth revisions, and scheduling delays.

High Error Rate

Human reviewers miss compliance violations, hidden adversarial clauses, and prompt-injection attacks buried in dense legalese.

Enormous Cost

Enterprise legal teams spend \$1,000–\$5,000 per contract in attorney time — multiplied across hundreds of contracts per month.

No Security Gate

Traditional AI tools pass documents directly to LLMs — leaving organisations exposed to prompt injection attacks and hidden malicious payloads.

Introducing Shield AI

A production-grade AI governance platform for enterprise contract review

Shield AI automates the review, risk scoring, compliance checking, and approval routing of enterprise contracts using a multi-agent AI pipeline — from upload to decision in seconds, not days.

~15 sec

upload → auto-approval decision

Low-risk contracts approved automatically · High-risk routed to humans ·
Adversarial documents quarantined

Extract

Structured clause extraction from
PDF & DOCX

Score

Risk scoring 0–100 with
configurable policy

Comply

HIPAA · GDPR · CCPA · SOC 2 ·
PCI-DSS

Secure

Two-layer gate blocks attacks
before any LLM call

Route

Auto-approve, escalate, or reject
— deterministically

Audit

Immutable append-only log of
every decision

Multi-Agent Pipeline

5 sequential agents · Pydantic-validated JSON outputs · Automatic fallback to Gemini 1.5 Flash

RAG context injected at Agents 2, 3 & 4 · Each output is Pydantic-validated JSON · Pipeline continues on single-agent failure

Security-First: Two-Layer Gate

Every document is scanned BEFORE any LLM ever sees it

LAYER 1

Veea Lobster Trap (DPI Proxy)

- Deep Packet Inspection of raw HTTP streams
- Pattern-matches prompt injection templates
- Detects CSS-invisible & hidden text attacks
- Scans for white-on-white character tricks
- Runs as a separate Docker sidecar service
- Independent of all LLM calls — always-on

LAYER 2

Offline Pattern Detector (Regex)

- Falls back automatically if Lobster Trap is unreachable
- Regex library of known adversarial payloads
- Zero LLM dependency — works fully offline
- Detects known injection phrase templates
- Configurable timeout via LOBSTERTRAP_TIMEOUT_SEC
- Quarantine status stored in security_events table

Adversarial contracts never reach the LLM · Quarantined contracts visible in the Security Dashboard · Every event logged

Agent Deep Dive: Security Gate & Classifier

Agents 0 & 1 — First two steps in every pipeline run

0

Security Gate

Model: Veea Lobster Trap + Offline Detector

Input: Raw PDF/DOCX text before any processing

Output: QUARANTINE or PASS decision · Threat type & description

- Runs synchronously at upload — before background pipeline starts
- Detected: prompt injection, CSS-hidden text, white-on-white
- Fallback offline pattern detector fires if proxy unreachable
- All findings logged to security_events table with severity
- Quarantined contracts never proceed to any LLM agent

1

Contract Classifier

Model: Gemini 2.5 Flash-Lite

Input: Full extracted contract text

Output: Contract type · Governing jurisdiction · Party names · Pydantic schema

- Identifies: NDA, Vendor, Employment, DPA, SaaS, Finance & more
- Extracts both party names and their roles
- Determines governing law and jurisdiction
- Classification informs later agents' prompts & RAG queries
- Output stored in agent_outputs table with prompt hash

Agent Deep Dive: Extraction & Risk Assessment

Agents 2 & 3 — RAG-grounded extraction and clause-level scoring

2

Clause Extraction

Model: Gemini Embedding Mode + RAG

Input: Full contract text + similar past contracts (via Pinecone retrieval)

Output: Clauses array — title, full text, page number, clause type

- RAG retrieves similar past contracts to improve extraction accuracy
- Each clause tagged with a semantic type (Liability, IP, Payment...)
- Page numbers preserved for citation in the review UI
- Extraction prompt versioned in prompts/ directory
- Fallback segmentation if LLM extraction fails

3

Risk Assessment

Model: Gemini 2.5 Flash-Lite + RAG

Input: Extracted clauses + prior risk findings (via Pinecone retrieval)

Output: Overall risk score 0–100 · Per-clause risk findings · Severity levels

- Each clause scored independently against risk policy weights
- RAG grounds scores on precedent from past contract reviews
- Output: overall score + clause-level findings with reasoning
- Score feeds directly into Approval Routing agent logic
- All findings stored in agent_outputs table with confidence

Agent Deep Dive: Compliance & Approval Routing

Agents 4 & 5 — Regulatory check and deterministic decision

4

Compliance Check

Model: Gemini 2.5 Flash-Lite + RAG (policy corpus)

Input: Extracted clauses + HIPAA / GDPR / SOC 2 policy snippets

Output: Violation list — framework, clause, severity, description

- RAG retrieves relevant regulatory snippets from corpus/
- Checks: HIPAA, GDPR, CCPA, SOC 2, PCI-DSS
- Each violation tagged with framework, clause reference & severity
- Critical violations can force REJECT regardless of risk score
- Corpus bundled in Docker image — no cold-start delay

5

Approval Routing

Model: Rules-based engine (No LLM call)

Input: Risk score + compliance violations + active scoring policy

Output: Decision: AUTO_APPROVE / MANAGER_REVIEW / LEGAL_REVIEW / REJECT

- Fully deterministic — same inputs always produce same output
- Reads active scoring policy from the database (runtime editable)
- Default thresholds: 0-30 Auto · 31-60 Manager · 61-80 Legal · 81+ Reject
- Compliance violations can override score-based routing
- Writes templated rationale saved in decisions table

RAG Architecture

Retrieval-Augmented Generation grounds every AI decision in precedent and policy

Technology Stack

Chosen for production reliability, observability, and cloud-native deployment

Backend

Framework:	FastAPI 0.110+ (Python 3.11)
ORM:	SQLAlchemy 2.0 + Alembic
DB (dev):	SQLite
DB (prod):	PostgreSQL · Cloud SQL
LLM:	Gemini 2.5 Flash-Lite
Embeddings:	Gemini embedding-001 (3072d)
Parsing:	pdfplumber · python-docx
HTTP Client:	httpx
Validation:	Pydantic v2

Frontend

Framework:	Next.js 16.2 (App Router)
Language:	TypeScript 5
Styling:	Tailwind CSS 4
Charts:	Recharts 3.8
Icons:	Lucide React 1.14
State:	Zustand 5.0
API:	Native fetch via proxy route
Build:	output: standalone (Docker)
UI:	12 App Router pages

Infrastructure

Containers:	Docker · docker-compose
CI/CD:	Google Cloud Build
Hosting:	Google Cloud Run (3 svcs)
Registry:	Artifact Registry
Secrets:	Google Secret Manager
Vector DB:	Pinecone (cosine, 3072d)
RAG fallback:	FAISS in-memory
Storage:	Google Cloud Storage
Security:	Veeva Lobster Trap (DPI)

PIPELINE

6-Agent Processing Pipeline

- Primary: Gemini 2.5 Flash-Lite
- Fallback: Gemini 1.5 Flash

Agent 1: Security Gate (No LLM) - Rules at upload — pre-LLM threat screening

- Lobster Trap + Offense Detector
- Prompt injection detection
- Malicious payload scanning
- Quarantine before any LLM call
- Offline-safe regex fallback

Agent 2: Risk Assessment (RAG) - Semantic risk scoring with RAG retrieval

- Gemini 2.5 Flash-Lite + Pinecone RAG
- Composite risk score (0-100)
- Critical / High / Medium findings
- Severity classification
- Peer contract comparison

Agent 3: Contract Classifier (Fast) - Determines type, sector & applicable frameworks

- Gemini 2.5 Flash-Lite
- Contract type (MSA / NDA / DPA / SAA...)
- Industry sector (healthcare / finance...)
- Jurisdiction & governing law
- Applicable frameworks (HIPAA / GDPR / SOC 2...)

Agent 4: Compliance Check (RAG) - Multi-framework regulatory verification

- Gemini 2.5 Flash-Lite + Pinecone RAG
- HIPAA pass / fail per clause
- SOC 2 pass / fail per clause
- GDPR pass / fail per clause
- Gap analysis & evidence citations

Agent 5: Document Extraction (Fast) - Structured data from raw contract text

- Gemini 2.5 Flash-Lite
- Parties & signatories
- Effective & expiry dates
- Key obligations & clauses
- Executive summary

Agent 6: Approval Scoring (No LLM) - Policy engine — deterministic, no LLM

- Policy-based No LLM
- AUTO_APPROVE
- MANAGER_REVIEW
- LEGAL_REVIEW
- REJECT

critical_finding_present

Decision Rationale

- Vendor's liability cap is extremely low relative to the risk exposure. If the vendor causes a significant breach or failure, the company has virtually no meaningful financial recourse.
- 1 critical finding(s) detected — legal review mandatory.
- Composite score 47.5/100 is below the auto-approval threshold for the Technology sector. Significant risk or compliance gaps require legal assessment.
- Score reduced by 15 points due to jurisdiction/financial risk rules (base score was 62.5/100).

Required Actions

- Negotiate vendor liability cap to at minimum 1x annual contract value, with a carve-out for data breaches (uncapped or super-cap).
- Resolve all critical findings before any approval.

AI Recommendation

Vendor's liability cap is extremely low relative to the risk exposure. If the vendor causes a significant breach or failure, the company has virtually no meaningful financial recourse.

Legal Review

53/100

Uploaded May 16, 2026, 06:49 AM · 35 clauses

COMPOSITE APPROVAL SCORE

LEGAL REVIEW

53/100

AI RATIONALE

· Overly broad IP assignment strips the company of ownership over innovations, insights, or derivative works created using the vendor's platform. This may include valuable business intelligence or proprietary algorithms.

· 1 critical finding(s) detected — legal review mandatory.

· Composite score 52.5/100 is below the auto-approval threshold for the Technology sector. Significant risk or compliance gaps require legal assessment.

· Score reduced by 10 points due to jurisdiction/financial risk rules (base score was 62.5/100).

Agent 4 — Security Gate Architecture

TWO-LAYER DEFENCE

Lobster Trap (Primary)

Pattern-based prompt injection detector. Scans every input for known injection signatures, adversarial payloads, and jailbreak attempts. Blocks and quarantines on match.

Offline Detector (Fallback)

Heuristic classifier that runs when the Lobster Trap is unavailable or uncertain. Uses flag-based regex analysis to detect suspicious content without network dependency.

WHAT TRIGGERS QUARANTINE

-  **Prompt injection** — Instructions attempting to override AI behaviour
-  **Role override** — Commands trying to change the AI's persona or permissions
-  **Policy bypass** — Phrases designed to circumvent safety guardrails
-  **Suspicious metadata** — Zero-width / invisible characters hiding instructions
-  **Decision manipulation** — Content trying to force a specific approval outcome

ENERGYXXILTD_05_08_2015-EX-10.13-Transportation_AGREEMENT.pdf (22 clauses)

What are the payment terms?

Who are the parties involved?

What are the termination clauses?

What governing law applies?

What are the payment terms?

Payments are due within 10 days of receipt of the invoice by ACH or wire transfer. However, the Transporter may change the due date if the financial condition of the Shipper or its guarantor is deemed impaired or unsatisfactory, or if the Transporter deems it necessary. If payments are past due, interest will be charged at an annual rate equivalent to the lesser of 125% of Citibank N.A.'s prime rate for ninety-day loans or the maximum rate allowed by law. The Shipper shall also pay all documented costs incurred by the Transporter to collect any unpaid amounts. The Transporter also has the right to set off amounts owed by the Shipper against amounts the Transporter owes to the Shipper if the Shipper fails to pay undisputed charges when due. In certain circumstances, the Transporter may require prepayment, a letter of credit, or a guaranty from the Shipper prior to delivering or accepting Shipper's Crude Petroleum.

Pipeline Performance

- Low-risk contracts auto-approve in ~15 seconds end-to-end
- Adversarial contracts quarantined before any LLM call
- Gemini fallback: 1.5 Flash automatically retried on model failure

Security & Compliance

- Two-layer DPI gate (Lobster Trap + offline regex)
- 5 regulatory frameworks: HIPAA · GDPR · CCPA · SOC 2 · PCI-DSS
- Immutable append-only audit log — every decision recorded

Engineering Quality

- 80+ unit & integration tests — Gemini fully mocked in CI
- Pydantic-validated JSON from every agent — no free-form strings
- All 21 demo contracts tested in pipeline regression suite

Production-Ready

- 3 Cloud Run services with Cloud Build CI/CD on push to main
- Database migrations managed with Alembic — Cloud Run Job pre-deploy
- Scoring policy runtime-editable — zero redeploy for policy changes

Deployment

Google Cloud Run · Cloud Build · Artifact Registry · Secret Manager · Automated migrations

shield-backend

- FastAPI + Python 3.11
- 1 Gi memory · Concurrency 10
- Timeout: 300 seconds
- Healthcheck: GET /health every 30s
- Cloud SQL via Unix socket
- Secrets from Secret Manager

shield-frontend

- Next.js 16 standalone build
- 512 Mi memory · Concurrency 80
- BACKEND_URL injected at deploy
- Proxies all API calls server-side
- Static 21 sample PDFs served
- output: standalone (Docker)

shield-lobstrtrap

- Veea DPI proxy sidecar
- 512 Mi memory · Concurrency 20
- Internal-only (never public)
- Backend calls via internal hostname
- Fallback: offline regex pattern
- LOBSTRTRAP_TIMEOUT_SEC=5

Makefile targets: make gcp-setup · make gcp-secrets · make gcp-build · make gcp-push · make gcp-migrate · make gcp-deploy

Transparent Pricing for Enterprise Scale

AI-powered contract review at a fraction of traditional legal costs — pay per contract processed

FROM

\$0.90

per contract

vs \$1,000–\$5,000 attorney review

Traditional Legal Cost

\$1,000 – \$5,000 / contract

Volume / Month	Unit Price	Monthly Cost	Annual Cost	Est. Savings*
100 contracts	\$2.50	\$250	\$3,000	\$97,000
1,000 contracts	\$1.80	\$1,800	\$21,600	\$978,400
2,000 contracts	\$1.50	\$3,000	\$36,000	\$1,964,000
5,000 contracts	\$1.20	\$6,000	\$72,000	\$4,928,000
10,000 contracts	\$0.90	\$9,000	\$108,000	\$9,892,000

** Savings vs. \$1,000/contract traditional attorney review cost (conservative estimate)*

 **15-Second Review**

vs 3–5 day attorney turnaround

 **Zero Legal Liability Risk**
